

One Sheet Wonder Layout #4

Moderately Easy

FREE
SAMPLE

Cutting Instructions:

- Cut four inches off the side of one double-sided sheet of 12x12 patterned paper. Set aside.
- Take the 8x12 inch piece and cut four inches off, resulting in a 4x8 piece and an 8x8 piece. Set aside.
- Cut the 4x12 inch strip into three equal squares of 4x4 inches each. Set two of the squares aside.
- Cut the remaining 4x4 inch square in half vertically and horizontally, resulting in four 2x2 inch squares.

Tips for Assembling the Layout:

- This layout works best with double-sided papers. It makes no difference when you are cutting, but you should refer to the dark and light shading on the illustration when assembling page.
- Use your favorite side of the double-sided paper for the lighter colored parts of the illustrated layout above. The darker colored pieces in the illustration will be mostly covered with photos for the finished page.
- If the patterned paper is striped or has an obvious "direction" on one side, take that into account when choosing which One Sheet Wonder template to use, or you may not like your final product.
